Education

Northeastern University Master of Science in Computer Science GPA: 3.92/4.00	Sep 2025 — Jul 2027 (Expected) Seattle, WA
South China Agricultural University Bachelor of Science in Computer Science and Technology	Sep 2011 — Jul 2015 Guangzhou, China

Selected Projects

<u>Detypify</u> Open-source Typst symbol classifier Modernized a pipeline recognizing 400+ Typst symbols from MobileNetV4 to MobileNetV5; stabilized CUDA/PyTorch training and ONNX export, and added macro-F1, confusion-matrix, and dataset diagnostics	May 2026 — Jul 2026
<u>Compact Language Model for Rust Code Generation</u> A 0.8B-parameter causal Transformer specialized for Rust code generation - Engineered an end-to-end LLM pipeline spanning dataset preparation, BPE tokenizer training, staged pre- and post-training, checkpoint recovery, inference, and automated evaluation - Created a reproducible evaluation harness for loss, bits per byte, and generation analysis; documented the methodology and results in a technical report - Ran 1,000-step compiler-feedback reinforcement learning on 10,281 Rust examples with 16 rollouts per prompt in 14 hours on one H100, raising training compile rate from 35% to 75% and isolating held-out generalization as the primary bottleneck	Jan 2026 — Apr 2026
<u>Mulan</u> Agentic workflow platform for AI video generation - Developed an orchestration engine for prompts, assets, asynchronous execution, and outputs across multimodal video models including Veo, Kling, and Seedance - Built an LLM agent with memory, tool calling, planning, reflection, and output validation that converted creative briefs into executable video pipelines; integrated human-in-the-loop editing, telemetry, and production observability	Mar 2025 — May 2026

Work Experience

<u>ByteDance</u> - IES User Experience Design Senior Software Engineer - Led 8 engineers building Jimu, an end-to-end visual workflow and rendering platform used by 50,000+ employees - Architected backend-for-frontend services linking page configuration, rendering, and content moderation across React, Vue, Node.js, Go, and Python - Led development of Argus, a visual DAG editor and rules engine for ML-powered harmful-content detection and filtering across Douyin, TikTok, and other products	Aug 2020 — Aug 2023 Shenzhen, China
<u>Tencent</u> - Social Network Group (SNG) Software Engineer - Built a distributed content-extraction platform with Redis, Puppeteer, Node.js, and Docker that processed about 10 million records daily - Built Elasticsearch and Grafana dashboards for monitoring, data quality, and crawler effectiveness	Nov 2018 — Aug 2020 Shenzhen, China
<u>Alibaba</u> - Tmall Global Software Engineer II - Built international e-commerce systems for Taobao Overseas, Lazada, and Tmall Global, supporting 5 country sites with localization, multiple currencies, and shared platform modules - Cut page load times in Southeast Asia by 60%+, from 5–11 seconds to under 2 seconds, through CDN acceleration, critical-resource extraction, and asynchronous loading	Mar 2016 — Nov 2018 Hangzhou, China
<u>Lizhi Network Technology Co.</u> Junior Software Engineer	Mar 2015 — Feb 2016 Guangzhou, China

Skills

- ML & AI Systems:** PyTorch, CUDA, ONNX, LLM Training, Reinforcement Learning, AI Agents, Tool Calling, Multimodal APIs
- Infrastructure:** Slurm, Weights & Biases, Docker, Redis, Elasticsearch, Grafana, Production Observability
- Programming Languages:** Python, Rust, TypeScript, JavaScript, Go, Java, C++
