

Shilin Zhu

✉ sasuke688848@gmail.com |  [sasuke40](#) |  [edward40.com](#) |  [sasuke](#)

Role: ML Systems / Full-Stack Engineer
Experience: 8+ years professional software engineering; 1+ year hands-on ML systems
Focus: Research workflows, **LLM pre-training/post-training** pipelines, automated evaluation, observability, and **agentic AI applications**.

Education

Northeastern University 2025/09 — 2027/07
Master of Science in Computer Science Seattle, WA, USA
GPA: 3.92/4.00
Relevant Courses: Machine Learning (A), Reinforcement Learning (A), Programming Design Paradigm, Algorithms

South China Agricultural University 2011/09 — 2015/07
Bachelor of Science in Computer Science and Technology Shenzhen, China
Relevant Courses: Algorithms, Data Structures, Operating System, Database System

Work Experience

ByteDance - IES User Experience Design 2020/08 — 2023/08
Senior Frontend Engineer Shenzhen, China

- Led and delivered key projects: Jimu (low-code engine) and Argus (content moderation system)
- Developed and maintained content audit system for Douyin, TikTok and other ByteDance products
- Led a team of 8 engineers to develop Jimu low-code engine from scratch, enabling rapid audit page creation for outsourcing staff

Tencent - Social Network Group (SNG) 2018/11 — 2020/08
Frontend Engineer Shenzhen, China

- Spearheaded the Intelligent Visual Crawl Platform development from scratch, implementing automatic article extraction capabilities
- Led architecture design and implementation of content audit systems, with focus on Node.js performance optimization
- Developed a visual page building platform that was open-sourced company-wide and adopted by multiple business teams

Alibaba - Tmall Global 2016/03 — 2018/11
Frontend Engineer II Hangzhou, China

- Served as core developer for major international e-commerce platforms: Taobao Overseas, LAZADA, and Tmall International
- Focused on cross-platform compatibility, performance optimization, and implementing modern frontend technologies

Lizhi Network Technology Co. 2015/03 — 2016/02
Frontend Engineer Guangzhou, China

- Developed and maintained the LizhiFM websites, activity pages, and mobile/PC experiences
- Improved frontend performance, responsive design, and cross-browser compatibility

Projects

Compact Language Model for Rust Code Generation 2026/01 — 2026/04
CS6140 final project; a 0.8B-parameter causal language model specialized for Rust code generation

- Report: [Etude: A Compact Language Model for Rust Code Generation](#) | Source: [SASUKE40/Etude](#)
- Built an end-to-end **ML research pipeline** for Rust code generation: dataset preparation, BPE tokenizer training, staged training, checkpoint resume, inference, and evaluation
- Implemented **LLM pre-training/post-training** workflows with loss/BPB tracking, qualitative generation checks, and reproducible command-line experiment scripts

- Trained and monitored distributed experiments on Northeastern HPC using **PyTorch**, **Slurm**, **H100 GPU**, and **Weights & Biases**

Mulan

2025/03 — 2026/05

Side project; workflow-based AI video generation application

- Built a workflow system for AI video generation, orchestrating prompt, asset, task, status, and result flows across third-party APIs including Veo, Kling, and Seedance
- Integrated agent APIs, authentication, real-time task communication, media/editor workflows, telemetry, and production observability

Jimu Building Block Visualization Platform

2021/08 — 2023/08

Low-code platform for internal audit page creation

- Built an end-to-end visual editing and rendering system with React, Vue, Node.js, Golang, and Python, supporting 50,000+ employees
- Led low-code engine development and built BFF services connecting page configuration, rendering, and content audit workflows at production scale

Argus Strategy Editor & Rule Engine

2020/08 — 2021/07

A full-flow visual DAG business process orchestration system and rules execution engine

- Led development of a visual DAG strategy editor and rule engine for composing, validating, and executing production moderation workflows

Intelligent Visual Crawl Platform

2018/11 — 2020/08

An intelligent visual crawl platform that supports automatic content extraction

- Built a distributed crawler with Redis, Puppeteer, Node.js, and Docker that processed about 10 million records per day
- Implemented monitoring, data quality analysis, and crawl effectiveness dashboards with ElasticSearch and Grafana
- Led the team in developing a visual crawl platform from scratch and shared at the [Global Internet Architecture Conference](#)

Taobao Overseas

2017/09 — 2018/11

An e-commerce platform for over 100 million overseas Chinese consumers worldwide

- Built product detail and mobile channel pages with React, applying PWA and AMP techniques for performance and reliability
- Optimized first-screen loading by extracting critical dependencies and fetching asynchronous resources through Service Worker

LAZADA Taobao Collection

2017/03 — 2018/11

A Southeast Asian e-commerce platform

- Supported five national sites with CDN acceleration, internationalization, multi-currency support, and unified frontend modules
- Optimized loading time from 5 - 11s initially to less than 2s in Southeast Asia

Skills

- **Programming Languages:** JavaScript, TypeScript, Rust, Java, C++, Python and Golang
- **ML Systems:** PyTorch, LLM Pre-training/Post-training, Data Pipelines, Automated Evaluation, Experiment Tracking, Distributed Training, Rust Code Generation
- **Infra & Systems:** Slurm, Weights & Biases, Docker, Redis, ElasticSearch, Grafana, Observability, Performance Optimization
